

3 & 4 WAY MULTI-PORT BALL VALVES

TRANS~Flo SERIES

Extremely Versatile Valve Design for Flow Diversion or Mixing

Models:

Flanged End

ANSI/Class 150 MPF15
ANSI/Class 300 MPF30
ANSI/Class 600 MPF60

Threaded End

800 WOG MPT30

Tri-Clamp End

150 WOG MPC15

Custom End Connections

Trans Flo Series

STANDARD PRODUCT NUMBER

MPF15-SS-L-FFG-L	(150# SS L-Port)
MPF15-SS-T-FFG-L	(150# SS T-Port)
MPF15-CS-L-FFG-L	(150# CS L-Port)
MPF15-CS-T-FFG-L	(150# CS T-Port)
MPF30-SS-L-FFG-L	(300# SS L-Port)
MPF30-SS-T-FFG-L	(300# SS T-Port)
MPF30-CS-L-FFG-L	(300# CS L-Port)
MPF30-CS-T-FFG-L	(300# CS T-Port)

Sizes:

3/4" - 14" Flanged End

(MPF60 only available in - 2"-8")

1/2" - 4", NPT & Tri-Clamp

DESIGN FEATURES

- One Piece Ball/Stem Trunnion - Supported Type
- Three Seat Design Maintains Proper Ball Position, four Seat Design Optional
- Actuator Mounting Flange ISO-5211
- Anti-Static Grounding Device
- Open And Closed Locking Device for Positional Safety Lockout to 6" 8", 10", and 12" Optional
- Flow Plans for Both T & L Ports can be field rearranged to meet many other Flow Options.
- Both T & L Valves can be offered with an off position.
- Body Cavity fillers for sizes 3/4" - 6"
- Full Port 1/2" - 12", Standard Bore 6" - 12"
- Handle Operated 1/2"-4", 6" & Larger, Gear Operator Standard

Simplify All Aspects of Piping Systems with Flo-Tite's Multiport Ball Valves.

2" and above Bellville washers are optional.

Cut-Away View

VALVE OPTIONS AND MODELS

Body Cavity Fillers designed to reduce the possibility of contamination by entrapment of process fluids in the void normally found behind the ball and the valve body.

Flo-Tite can supply **various seat materials** to handle a wide variety of special applications.

Severe service valves are available with hard face metal seats, shutoff class V.

Special Alloys such as Alloy 20, 316L, Duplex, Monel and Hastelloy are available.

- MPF15** Full Port Flanged End, Class 150
Sizes **1/2" thru 14"**
- MPF30** Class 300
- MPF60** Class 600
- MPSF15** Reduced Port Flanged End, Class 150, sizes 6" thru 12"
- MPT30** Full Port Threaded sizes 1/2" - 3"
- MPC15** Full Port Clamp End sizes 1/2" - 4"

Different End Connections may be combined to meet specific requirements, as our heavy duty body for all models conforms to ANSI Class 300, sizes 1/2" thru 4"

SPECIFICATION STANDARDS:

Flanges ANSI B16.5
Shell/Wall ANSI B16.34

Federal Specifications:
WWV-V-35B Valve, Ball, Type II
Class C, Style 3, End Connection B

ABS Type Approval:
Product Design
Assessment (PDA)

All Flo-Tite's ball valves are designed, constructed, and tested in strict accordance with the most current international standards, such as API, ASME, BS and DIN.

Flo-Tite's Quality Control Guarantee is established according to rigorous QA/QC procedures. We obtain high quality products by strict observance of these procedures throughout every stage of production. Material Test Reports (MTR) are available for all valve series. MPF valves are rated to 150 psi saturated steam/250 SWP with special seats.

PRESSURE AND TEMPERATURE DATA:

Pressure Test 100%
ANSI B16.34 / API 6D

Shell / Hydro Test Pressure:
Class 150 425 psi or 30 bar
Class 300 740 PSI or 51 bar
Optional 1100 psi or 76 bar

Seat / Air Test Pressure:
Class 150 80 psi or 6 bar
Class 300 80 psi or 6 bar

ATTENTION

MAWP/WOG is a do not exceed pressure at normal ambient NPT & Weld End Models

Rating Curve applies to both "L" and "T" port configurations.

All Values conform to ANSI Class pressure ratings. They are rated for a maximum differential pressure of 275 psi, and a maximum temperature of up to 550 °F. WCB - 285 psi Max. Complies with ANSI B16.5 and B16.34 standards.

Extended Pressures and temperatures may be achieved by altering designs. For specific applications, consult factory with service condition. If thermal cycles in excess of 200° are expected, use fire safe design trim.

Fire Safe Design

Flo-Tite's multiport valves can be fitted with graphite body seals and stem packing. This will make the valve fire safe to atmosphere by preventing external leakage that may add to fire intensity.

Cavity Fillers

Optional cavity fillers are available for multiport ball valves. Cavity fillers reduce the possibility of media build-up due to line media fluids becoming entrapped in the cavity between the ball and the valve body wall.

Seat Selection

A wide range of seat materials are available to meet most applications. The standard seat is TFM. Options include (R) RPTFE, (S) 50-50, (Y) Carbon Filled TFM, (P) PEEK, and (M) hardfaced metal.

Direct Mount Capability

2" and smaller sizes are designed to be directly flush mounted with actuators. The integrally cast top flange ensures positive actuator mounting. The mounting flange is designed to ISO 5211 standard.

Trunnion Support Design

One piece stem/ball trunnion support design provides for precise operation of the ball rotation. This precise ball positioning is often not possible in more common multi-piece stem ball designs.

Standard Anti-Static Device

All valves are standard with anti-static grounding device.

Standard Locking Device

All valves can be padlocked to limit unwanted access.

Multiple Seat Design

Flo-Tite's multi-port valves are equipped with three seats as standard. This allows all sides to be used as an inlet or block port without leakage. It also aids in balancing the ball for optimal control during modulation. An optional fourth seat can also be added to insure the highest level of performance; excellent for high cycle control automation requirements. The fourth seat is provided as standard on all four designed valves.

Flow Indication

All valve stems are marked with flow path direction

Typical Ball Configuration

Pig Catcher Ball

Multiport Ball Valve Advantage

Flo-Tite's Multiport Ball Valves are excellent alternatives for plug valves offerings:

- Lower Operating Torques
- Ease of Maintenance
- Low Cost of Repair
- Substantially Larger Ports, Maximum Cv's
- Ease of Actuation, With Our Secure Mount Design
- All T Port Flow Plans are Available From One Ball and can be Field Re-Arranged.
- Require less Space for Installation as all Pipe Connections are Level Plane, Most Plug Valves are Bottom Entry.

Pneumatic Actuator Dimensions shown in this drawing are for full port units based on 80 psi air to actuator, valves with standard Super-Tek TFM (F) seats, clean fluid only at ambient temperatures, and pressures not to exceed 800 WOG. Consult factory for additional actuator types and dimensional drawings.

All units are generally sized for clean wet service, actuator supply air 80 psi

ACTUATORS & CONTROLS

Torque Factors for Special Applications:

- 1 - increase the breakaway torque by 20% for dry gas service or demineralized water
- 2 - add 10% for infrequent cycling
- 3 - add 40% for slurry or light abrasive content
- 4 - add 60% for metal seated valves, class V shut-off
- 5 - deduct 10% for high lubricity service

Torque figures are for valves up to 800 psi service. For higher pressure applications consult factory. Valve torque can vary due to pressure, media, and temperature.

The information provided above should be considered as a guide only and must be adjusted according to experience and judgment.

All Multiport Valves have integrally cast mounting pads for ease of mounting actuation equipment.

Double Acting Pneumatic Actuator:

Note: Actuator sizing for clean liquid media, and supply air 80 psi.

Electric Actuator Assembly:

Pneumatic Actuator Dimensions shown in this drawing are for full port units, valves with standard Super-Tek TFM (F) seats, clean fluid only at ambient temperatures, and pressures not to exceed 800 WOG. Consult factory for additional actuator types and dimensional drawings.

All units are generally sized for clean wet service

MPF - 3 Way w/ Electric Actuator

Bottom Entry Series

Flow can occur across the ports during ball position change. To avoid this occurrence, you would need a non-transflow design valve. Please see our bottom entry series, Tech Bulletin Page 96

Model: MPF155
Size Range: 2", 3", 4"
Class 150/300/600

Trunnion Design 3 or 4 Way Valves

Please see our Tech Bulletin Page 80

Model: 3W-TM
Size Range: 6"-20"
Class 150/300/600

Tri-Pro Bottom Flow Series

Please see our Tech Bulletin Page 98.

Model: 3W-HPF
Size Range: 1/4" - 2 1/2"
1500 WOG

Special Position Series

120 Degree 3 Way
Piggable Ball Valve

Size Range: 3" - 8"
Class 150

Multi-Port Series

Please see our Multi-Port series, Tech Bulletin Page 100.

Model: MPT100
3 & 4 Way
Size Range: 1/4" - 2"
800 WOG/PSI

Direct Mount 3-Way Series

Please see our Multiport series, Tech Bulletin Page 102.

Model: DM-MPT100
Size Range: 1/2" - 3"
1000 WOG/PSI

3-Way Brass Series

Please see our Multi-Port series, Tech Bulletin Page 105.

Model: MPT355/MPT365
Size Range: 1/4" - 4"
400 WOG/PSI

Transflo - 600 Series

Class 600 3 Way
Ball Valves

Model: MPF60 Size
Range: 2" - 8" Class
600

FLOW PATTERNS

All T-Port Flow Patterns can be changed in the field without disassembling valve

TRANS-FLO SERIES

L-PORT: 90°

DIVERTER TYPE

L-PORT: 180°

4-WAY LL PORT 90° TURN

4-WAY VALVES

4-WAY L PORT 180° TURN

4-WAY I PORT 90° TURN

TRANS-FLO SERIES

4-WAY T PORT 270° TURN

All above standard flow plans are set to move in a counter clockwise 90 degree rotation, moving from position 1 to position 2. Any port can be used as an inlet port. Standard actuated valves also move in a clockwise 90 degree rotation. A clockwise movement can be achieved with a reverse piston change if required. Optional 180 degree, 1 and 2 position is also available, please consult factory.

Non Transflow

Flow can occur across the ports during ball position change. To avoid this occurrence you would need a non-transflow design valve. Please see our bottom entry series, Tech Bulletin page 96 or 98.

Valve Design Flexibility and Travel Stop

Flo-Tite's unique valve design offers excellent flexibility, allowing easy in field re-arrangement of most all flow plans without disassembly. In many cases it can be accomplished as easy as travel stop orientation or repositioning of the valve ball. Please contact factory for detailed additional information on this valuable design feature.

Different travel stops are used to arrange all flow plan selections.

TRANS~Flo SERIES

Flo-Tite Trans-Flow Series Valves are Available with all Types of Automation.

Flo-Tite TRANS-FLOW series valves are offered as standard with an adjustable packing gland in size 1 1/2" - 12". This feature eliminates the need for removal of automation equipment when stem packing requires a field adjustment.

Flo-Tite offers a complete package of pneumatic, hydraulic, & electric actuators. All types of controls & accessories for a vast number of special automated applications are available.
